Question of the Day: If I have already had COVID-19 and recovered, do I still need to get vaccinated with a COVID-19 vaccine when it's available? (Source: Centers for Disease Control and Prevention)

- A COVID-19 vaccination should be offered to you regardless of whether you already had the COVID-19 infection. You should not be required to have an antibody test before you are vaccinated.

- However, anyone currently infected with COVID-19 should wait to get vaccinated until after their illness has resolved and after they have met the criteria to stop isolation.

- Additionally, current evidence suggests that reinfection with the virus that causes COVID-19 is uncommon in the 90 days after initial infection. Therefore, people with a recent infection may delay vaccination until the end of that 90-day period if they choose to.
